Daniel Aaron Levenstein

512-885-5925 | daniel@levenstein.me | LinkedIn Profile | GitHub Portfolio

Data Engineer & Cloud Developer

Software Developer with experience building scalable, cloud-native data platforms and analytics pipelines. Experienced in Apache Spark–based ETL, AWS, Kubernetes-observed systems, and data validation in regulated environments, with hands-on experience in machine learning workflows and retrieval-augmented systems.

Certifications

- AWS Cloud Practitioner, AWS (2025)
- Post Graduate Program in Artificial Intelligence and Machine Learning, UT (In Progress)

Professional Development:

- Apache Airflow: Completed online courses with hands-on projects, including DAG orchestration and pipeline monitoring
- Docker, Kubernetes & Terraform: Completed online courses covering container orchestration and infrastructure-as-code best practices
- AI & Machine Learning: Post Graduate Program with 7 hands-on ML projects and case studies using real-world datasets

Technical Skills

- Data Engineering & Analytics: Apache Spark, SQL, Pandas, NumPy, Apache Airflow
- Machine Learning & AI: Scikit-Learn, OpenCV, embeddings, LLMs, RAG systems
- Cloud & Infrastructure: AWS Lambda, Step Functions, Batch, ECS/EKS, S3, RDS, CloudWatch, CodeBuild
- Databases & Storage: SQL, DynamoDB, Vector databases

Professional Experience

Freelance ML Developer **| Self Employed**
Austin, TX **| 01/2025 - Present**

Built out Machine Learning Pipelines based on real world data and created report for project managers. (Python, Scala)

- Stress vs Physical Activity Kaggle Notebook: Used K-Means algorithm to generate correlation between stress and physical activity across different population clusters.
- LLM Chatbot with Embedded RAG Retrieval: Built a (RAG) system using HuggingFace to answer medical questions.
- Safety Helmet Detection Project: Built a computer vision system to detect helmet usage by workers using OpenCV, achieving 98% test accuracy.
- FoodHub Data Analysis: Cleaned and interpolated data for food delivery app using NumPy and Pandas and displays top performing restaurants.
- Reversi (Othello) AI: Deployed a REST API to AWS and collaborated with a front-end developer to turn prototype into a production application and administered AWS infrastructure for project.

Software Developer **| Finra / Consultnet**
Rockville, MD **| 10/2022 – 12/2024**

Developed and validated scalable ETL pipelines using Apache Spark to ensure accurate data ingestion. (Java, Scala, AWS)

- Generated test data for AWS Step Functions using Apache Spark and Hibernate, improving ingestion workflows.
- Developed and validated scalable Spark-based ETL pipelines supporting analytical workloads over large-scale datasets.
- Collaborated with compliance teams to document and trace data workflows, supporting auditability of system.

Pipeline Engineer **| B.Well Connected Health**
Austin, TX **| 09/2020 – 09/2022**

Monitored the integrity of a healthcare app using a Test-driven development methodology. (Python, AWS)

- Led weekly review meetings with Dev and QA teams, resulting in process improvements.
- Built an AWS Lambda monitoring framework to track application health over time and alert on failure.
- Implemented a QA tool that automated Section 508 accessibility testing and generated a report with results.
- Performed Security scans against the application using OWASP ZAP, increasing application resilience.
- Built out AWS infrastructure for automated test execution using AWS CodeBuild and AWS Batch.

Education:

- Bachelor of Computer Science, Texas State University
